

RESUME
ABBAS AL- OMARI

KEY QUALIFICATIONS

Dr. Al Omari is a holder of a Ph. D. degree in Civil and Environmental Engineering, Water Resources and Environmental Engineering, from Washington State University, 1995. His master's degree is from the Middle East Technical University, Turkey, in Water Resources and Environmental Engineering too. His bachelor's degree is in Civil Engineering, from Yarmouk University, in Jordan. Dr. Al Omari spent most of his career at the Water, Energy and Environment Center of the University of Jordan. For the academic year 2007/2008 he was a visiting professor at Washington State University; for the academic year 2016/2017 he was a Fulbright scholar at Texas A&M University.

In terms of background, Dr. Al Omari has a wide and deep background in several water related issues including drinking water treatment, distribution and quality; wastewater treatment and reuse in irrigation; hydrology; hydraulics; water resources management at the basin and national levels, and water quality. Dr. Al Omari is a professional modeler; he is a professional user of several software listed at the end of this CV.

In terms of teaching Dr. Al Omari taught Hydraulics, Hydrology, Fluid Mechanics, Water Resources Engineering, Water and Wastewater Treatment, Materials in Civil Engineering, Statics, and Senior Design Projects. Furthermore, Dr. Al Omari has supervised more than ten graduate students, from Jordan and Germany. Dr. Al Omari further taught graduate courses within the Multi-disciplinary multicultural master's program, in Integrated Water Resources Management, taught by the University of Jordan in Jordan, and Cologne University of Applied Sciences in Germany. Dr. Al Omari had taught at the University of Jordan, Al Albayt University in Jordan, Prince Mohammad Bin Fahd University in Saudi Arabia, Washington State University during his summer visits, and University of Texas At Tyler, where he is currently an adjunct professor. Furthermore, Dr. Al Omari taught several short courses, one week and two-week courses, to

practicing engineers. He further held several training workshops for practicing engineers from Jordan, Syria, Egypt, Iraq and others.

Over his career, which spans about twenty-five years now, Dr. Al Omari participated in more than ten internationally funded research and development projects, in addition to several locally funded projects. These projects addressed water scarcity, water and wastewater treatment and reuse, drinking water treatment and distribution, training of water professionals, low-cost wastewater treatment for small communities, natural based wastewater treatment, and others detailed on my CV.

Over his career, Dr. Al Omari has attended and organized many professional meetings, workshops, and conferences. He further prepared many professional reports which detail the project activities and findings. He participated in, and organized many workshops, the purpose of which is to communicate the findings of these projects to the stakeholders, including possible implementing governmental body and end users as well. He participated in several technical committees in Jordan at the national level, one committee, for example, addressed Environmental Impact Assessment for proposed development projects, which usually included a scoping session to which all stakeholders are invited.

Over his career Dr. Al Omari established a network of water professionals, stakeholders, research institutes and universities within Jordan, the Middle East and North Africa, and internationally as well. He has research partners from the Middle East, Europe, the United States, Africa, and Latin America. He worked within multi-nationality and multidisciplinary teams, he coordinated and integrated the work package(s), assigned to the University of Jordan, where he spent most of his career, with the other international partners.

Dr. Al Omari has high level of technical writing skills; the findings of most of the research and development projects, he participated in, have been published in peer reviewed, internationally recognized journals and conferences, which require the highest standards of writing skills. He also developed a high level of analytical skills which are necessary for the interpretation of the findings of research and development projects. Furthermore, he developed a high level of communication skills necessary to communicate among a multidisciplinary and multi-nationality team and diverse body of stakeholders of conflicting interests.

Dr. Al -Omari's research interests are in drinking water quality modeling in water distribution systems such as modeling the propagation and the decay of constituents found in drinking water supplies i.e. chlorine and tri-halomethanes, river basin modeling (flow and quality), water, water energy nexus, water allocation, Non-Revenue Water, Climate Change causes, mitigation and adaptation, and water resources management.

EDUCATION

Ph.D. Civil and Environmental Engineering, Washington State University, May, 1999.

M.Sc. Civil and Environmental Engineering, Middle East Technical University, Ankara-Turkey, Jan. 1994.

B.Sc. Civil Engineering, Yarmouk University, Jordan, June, 1985.

Courses earned towards master's degree

- Advanced Water and Wastewater Treatment,
- Anaerobic Treatment of Wastes,

- Water Quality Management,
- Industrial Wastewater Treatment.
- Hydraulic System Design 1,
- Open Channel Hydraulics, and
- Water Resources System Engineering 1 (optimization techniques: linear programming, dynamic programming, integer programming)

Title of master's thesis

Development of a Methodology for Evaluating Sludge Drying Alternatives

Courses earned towards Ph.D. degree

- Environmental Engineering Processes,
- Advanced Hydraulic Engineering (Water Quality Modeling),
- Principles of Environmental Engineering,
- Unsteady Closed Conduit Flow,
- Fluid Mechanics,
- Applied Mathematics 1,
- Graduate Seminar, and
- Numerical Modeling in Fluid Mechanics

Title of Ph. D. dissertation

Unsteady State Inverse Chlorine Modeling in Pipe Networks

SELECTED RELEVANT EXPERIENCE

Aug. 2023 – Now: Adjunct Professor of water Resources and Environmental Engineering, Civil Engineering and Construction Management Department, University of Texas at Tyler,

April 2014: Senior researcher/Full professor, Water, Energy and Environment Center, the University of Jordan.

Fall of 2018: Professor of Water Resources and Environmental Engineering at Al Albait University (Part time).

Aug. 2016 - June 2017: Visiting Fulbright scholar at Texas A&M University working on water, energy food nexus,

Aug. 2015 - Aug. 2016: Professor of Civil Engineering at Prince Mohammad bin Fahad University, Al Khobar, Saudi Arabia,

February 2012 till Aug. 2015: Director Assistant, Water, Energy and Environment Center, the University of Jordan.

March 2007 – April 2014: Associate researcher/Associate professor, Water, Energy and Environment Center, University of Jordan.

September 2007 – August 2008: Visiting professor at Washington State University working on optimum design of water distribution systems,

Summer 2005 and summer 2006: Visiting professor at Washington State University,

1999 – March 2007: Assistant Researcher/Assistant professor, Water and Environment Research and Study Center, University of Jordan.

1995: Research Assistant, Water and Environment Research and Study Center, University of Jordan.

Feb. 1988 – Jan. 1992: Civil Engineer in road construction projects in Saudi Arabia.

TEACHING

Undergraduate courses

- ✓ Senior Design project,
- ✓ Fluid mechanics,
- ✓ Hydraulic Engineering,
- ✓ Water and Wastewater Treatment,
- ✓ Water Resources Engineering,
- ✓ Materials in Civil Engineering, and
- ✓ Statics.

Graduate courses

Dr. Al-Omari has participated in teaching the following courses in the Integrated Water Resources Management Program (IWRM) which is a graduate program taught jointly with Cologne University for Applied Sciences in Germany.

- ✓ Sanitation and Public Health,
- ✓ Water Science (hydrology and water quality), and
- ✓ Water Supply (hydraulics and quality of water distribution systems).

SHORT COURSES

Dr. Al-Omari has also taught the following short courses which are directed to practicing engineers:

- ✓ Drinking Water Supply Systems (Jordan)
- ✓ Wastewater Treatment and Reuse (Jordan)
- ✓ Management of Wastewater Treatment Plants (Jordan)
- ✓ Drinking Water Supply II (USA)
- ✓ Low-scale, Low-cost, Wastewater Treatment for Reuse in Jordan (Jordan)
- ✓ Computer Simulation of Water Networks (Egypt)
- ✓ Operation of wastewater treatment plants (Jordan).

FUNDED RESEARCH PROJECTS

Dr. Al-Omari has effectively participated in more than thirteen research projects, most of which are internationally funded, some are locally funded. These projects ranged from research, to training and

development of master's programs that address different topics such as Integrated Water Resources Management; climate change, water and food security.

Internationally funded projects

1. Jordan Water Skills Enhancement and Information to Decision – Makers project.

The project was funded by the US Agency for International Development (USAID). The lead institute for the project was Washington State University. Purdue University was a subcontractor from the US. Three universities from Jordan participated in the project, which are University of Jordan as the main contactor in Jordan, Jordan University of Science and Technology and Hashemite University. The original duration of the project was two years (March, 2000 – July, 2002). The project was extended until July, 2004.

This project aimed at improving the skills of the Ministry of Water and Irrigation engineers via training. Engineers from other key ministries in Jordan were targeted too, which are the ministry of Environment and the Ministry of Agriculture. The project consisted of about thirty five, water related, training courses. Most of the courses were held in Jordan, However, some courses were held at Washington State University (WSU) and/or Purdue University. In addition to the training courses the project included three research activities, which are:

- Water allocation action training: The objective of this activity is the development of a model that determines the optimum use of available water subject to certain constraints. By the end of the project, MWI engineers were trained on the use of the developed model.
- Reservoir Management action training: The objective of this activity is the development of operational rules for a series of reservoirs based on optimizing the net profit of these reservoirs subject to certain constraints. MWI engineers were trained on the use of the final product.
- Zara And Zarqa Ma'in Spring's Study. The objective of this study is the evaluation of the quality and quantity of the water of springs at Zara and Mai'n in order to be used for drinking purposes. The study was completed in July, 2001.

2. MEditerranean Development of Innovative Technologies for integrAted waTer management (MEDITATE).

This project was funded by the EU under the sixth framework program FP6-2002-INCO-MPC-1. The project started on May 1st 2004 and lasts till October 31 2007. The lead institute for this project is Bureau de Recherches Geologiques et Minieres (BRGM) which is a research institute in France. Other partners in the project are Center for National de la Recherche Scientifique (CNRS) in France, Cranfield University in Britain, Hacettepe University in Turkey, the Water Energy and Environment Center (WEEC), Ministry of energy and water in Lebanon, Atomic energy commission in Syria, and Provectos E Instalaciones de Desalacion sa (PRIDESa), which is a private company in Spain. The project aimed at the development of Water Management Support Systems (WMSS) for four basins in Lebanon, Syria, Turkey, and Jordan.

3. **International master program “Integrated Water Resources Management” for German and Arab young professionals**

This project is a joint master’s program between WEEC of the University of Jordan and the University of Applied Sciences at Cologne (UASC) in Germany. The focus of the program is Integrated Water Resources Management (IWRM). Target group of the program is young water professionals from Germany and the Arab World (Jordan, Palestine, Iraq, Syria, morocco, Tunisia, Yemen, Sudan, Egypt). This project was funded by Deutscher Akademischer Austauschdienst (DAAD). The program lasted between 2006 and 2016. In this project, I participated in coordinating the work with the lead institute in Germany, and faculty members in Jordan, which included designing the program at the proposal writing and beginning of the program stages, students’ selection, teaching, thesis selection and defence, and reporting including budget. In addition to following up some administrative issues with the University of Jordan administration.

4. **Sustainable Water Management in Developing Countries (SWINDON)**

This project is part of the Higher Education **Excellence in Developing Cooperation (EXCEED)** program funded by the German Academic Exchange Service (DAAD). The strategic goal of EXCEED II is to contribute to the shaping of future subjects and scenarios through active cooperation between developing and industrialized countries. The lead institute of the project is Technische Universität Braunschweig in Germany. The three phases of the project lasted between 2010 and 2022. The project consortium consists of partners from four regions which are; Middle East and North Africa, South East Asia, Latin America and Sub-Sahara Africa. The Middle East and North Africa region includes partners from Turkey (Akdeniz University, Yildiz Technical University, Necmettin Erbakan University, Tubitak Marmara Research Center), Egypt (Ain Shams University, Al Mansoura University) and Jordan (the University of Jordan and Mutah University). The project activities included workshops, conferences, joint research projects, faculty exchange and student exchange. The second phase of the project started January 2015 and lasted for five years; the third phase lasted between 2020 and 2022. In this project, I coordinated the project activities, for the second and third phases, with the different partners which included (workshops organization, faculty and student exchange, conferences organization, and joint research).

5. **Micro-plastics in drinking water in Jordan**

MPs have been detected in surface and ground waters, in addition to finished drinking water and bottled water as well, in many places around the world. Though the negative health impacts of MPs have not yet been identified, it is important to investigate their presence in water courses and finished drinking water in Jordan. This study is a first attempt in this direction. This project aims at identifying and quantifying micro-plastics in King Abdulla Canal which is the source of drinking water to West Amman. Micro-plastics removal efficiency by the different treatment units in Zai Water Treatment plant will be evaluated. This project is funded by the Deanship of Scientific Research at the University of Jordan.

6. **Decision support system for the management of Zarqa River**

This project is funded by the Scientific Research Support Fund at the Ministry of Higher Education in Jordan. The project aims at developing a GIS data base of pollutants to the river. The GIS data base will include information about the polluter, the pollutant, and the concentration. The data base will include both point and non-point sources. The project will also develop a water quality model for the river for

temperature, Electrical Conductivity (EC) and Chemical Oxygen Demand (COD). The project also aims at assessing the health impacts of the river. The project started on May 5th 2011 and will last for 30 months.

7. **Fate of Disinfectants and Disinfectant by Products in Drinking Water Networks.**

This project aimed at modeling chlorine decay in water supplies as well as studying the formation of chlorine by products such as trihalomethanes in part of Amman water supply. The project was funded by the Higher Council for Science and Technology which is a Jordanian council that supports scientific research. The duration of the project is two years (Nov., 2000 – Nov., 2002). The project was extended for one year.

8. **Nature Based Solutions for Domestic Water Reuse in Mediterranean Countries (NAWAMED)**

NAWAMED aims at changing the urban water management practices by means of innovative, sustainable, and low-cost treatment technologies, applicable in a decentralized way, to replace the use of high quality potable water for purposes such as irrigation and toilet flushing by non-conventional water resources such as treated wastewater. The two nature-based technologies that will be implemented in this project are constructed wet land and greywater treatment and reuse. The project is funded by the European Union and will last from October 2019 until October 2022. The lead institute is Province of Latina from Italy, the partners are: IRIDRA which is an engineering firm from Italy, SVI.MED. EuroMediterranean Center for the Sustainable Development from Italy, Centre for Water Research and Technologies from Tunisia, University of Jordan, Energy and Water Agency from Malta, and American University of Beirut from Lebanon. Associate partners are municipality of Tunis, municipality of Jerash from Jordan, municipality of Ferla from Italy and Politecnico di Torino from Italy.

9. **Innovations in Water Education Programs: Enhancing Water Security and Socio-economic development in Eastern Mediterranean Under Climate Change (WaSec)**

The project aims at the development of a curriculum for a master's program that meets the market needs and satisfies the enterprises needs in Jordan and Palestine. The goal is to improve water resources management by improving water use efficiency taking into consideration climate change. The project is funded by the ERASMUS+ Program of the European Union. It lasts for three years from Nov. 2019 until November 2022. Palestine Technical University – Kadoorie (PTUK) is the lead institute. Partners are: Jordan University of Science and Technology, Technologiko Ekpedeftiko Idrima Anatolikis Makedonias kai Thraikis (EMaTTech), the Amsterdam Centre for World Food Studies (ACWFS), Al Quds University (AQU), the University of Jordan, the Open University of Cyprus, Universidad Politécnica de Madrid (UPM), Princess Sumaya University for Technology (PSUT), Palestinian Water Authority – (PWA), Applied Scientific Research Fund (ASRF) in Jordan, Creative Thinking Development in Athens, and Hydro-Engineering Consultancy (HEC) in Palestine.

10. **Development of an MSc. Program in Climate Change, Sustainable Agriculture and Food Security (CCSAFS)**

The project is a European Commission ERASMUS plus that aims at capacity building in partner institutions by designing and implementing a multi-disciplinary master's program in Climate Change, Sustainable Agriculture and Food Security in accordance with Bologna process. The lead institute of the

project is the University of Crete. Other EU partners are University of Padova, Italy and Regional Centre of Expertise on Education for Sustainable Development, Crete. The project includes five partners from Egypt which are: Aswan University, Al Azhar University, Heliopolis University, Suez Canal University, and SEKEM/RCE Cairo, in addition to four partner universities from Jordan which are: Jerash University, Jordan University, Mutah University, and Jordan University of Science & Technology. The project started in early 2017 and will last until the end of 2019.

11. **Capacity building in Water and Renewable Energy Sectors**

This project includes two training courses, one in water supply and one in renewable energy resources. It is funded by the United Nations Educational Scientific and Cultural Organization (UNESCO).

12. **Total Maximum Daily Load (TMDL) for Little Spokane River (LSR) in Washington State.**

This project aimed at the determination of the TMDL for LSR for total Phosphorus, total Nitrogen, temperature and coliform count based on the current levels of these parameters as well as loads received from LSR tributaries. Dr. Al-Omari participated in this project for a short period while visiting Washington State University in the summer of 2006.

13. **A System Approach to Wastewater Biotreatment for the Protection of Mediterranean Coastal Areas (BIOWATSYST):**

The project aimed at determining the performance of constructed wetlands, as a low cost technology for treating domestic wastewater for subsequent reuse in irrigation. The project was funded by the European Union (EU) through the Avicenne Initiative. The duration of the project was four years (1997 – 2001).

REVIEWER

Dr. Al-Omari is a reviewer for the following international journals:

1. Water Supply Research and Technology, AQUA,
2. Journal of the American Water Works Association (AWWA),
3. International Journal of Hydrology Science and Technology (IJHST),
4. Journal of Environmental Monitoring and Assessment,
5. Water Science and Technology: Water Supply
6. Water resources management, and
7. Journal of Environmental Management.

GRADUATE STUDENTS

Dr. Al-Omari supervised the following graduate students:

1. Application of Hydro Turbines in Water Supply Systems for Energy Recovery in Jordan; A Case Study of Aqaba Water Supply System, by Abdalla Khair, 2013,
2. Analyzing of water loss reduction strategy in Amman, Jordan, towards a pro-poor approach, by Maika Muller, January 2012,
3. Non-Revenue Water reduction by involving the private sector, case study of Madaba, Jordan, by Hani Al-Koli, January 2012,
4. Hydrological balance of the Jeita spring catchment, by Philip Schuler, January 2012,
5. Optimum water allocation in Azraq basin using WEAP system by Ali Al-Hayajneh, January 2011,
6. Non-Revenue water management in Sana'a water distribution system by Taha Al-Washali, January 2011,
7. Towards the prevention of water pollution from industrial activities in the Nahr El-Kalb watershed by Christine bastch, January 2001,
8. The potential of rooftop rainwater harvesting for Sana'a, Yemen, by Musaed Aklan, January 2001,
9. Water demand management as an instrument to reduce the negative water balance in the Damascus basin, Syria by Christian Glaser. January 2011.
10. Modeling sea water intrusion into Rosetta branch, Nile River Delta, Egypt by Mustafa El-Morshdy, January 2011,
11. Integrated water management for Lafarge Cement Jordan by Azzam Hamaideh, January 2010.
12. Adsorption of selected nutrients from wastewater effluents onto Zeolite modified soil by Mohammad Karabsheh, Jan., 2004,

13. Anaerobic treatment of strong sewage by applying combined systems of AF and UASB by Zoulina F. Sawajneh, Aug., 2004.
14. Chlorine decay rate and chlorination efficiency studies for drinking water in Jordan by Aseel A. Al-Nimer, June, 2002,
15. The effect of bromide ion on trihalomethane formation in King Abdulla Canal and Zai water treatment plant by Abed Y. Abdelqader, July, 2002,

FACULTY TRAINING

I attended the following training workshops which aim at updating the different skills of faculty members to enhance their capacity in both teaching and training:

1. Training workshop on *Patent Registration*, November 2019,
2. Training workshop on *Cyber Security*, Feb. 2020,
3. Training workshop on *Camtasia Studio*, March 2020,
4. Training workshop on *Teaching Methodologies*, this workshop was held within the Climate Change, Sustainable Agriculture, and Food Security master program, 29th July to 1st Aug., 2018, Jordan,
5. Training workshop on *Practicing Methodologies for the Inclusion of Sustainable Development Goals* (SDGs) in course curriculum, this workshop was held within in the Climate Change, Sustainable Agriculture, and Food Security master program, (21-24) February, Jordan.

CONFERENCES AND WORKSHOPS

1. ASCE Region 6 Student Symposium 2024. April 10-13, San Anjelo, Texas.
2. The 12th International Symposium of the Inter-Islamic Network on Water Resources Development and Management (INWRDAM): WEF Nexus for Human Security in the Post Pandemic Era “Building Bridges Towards Human Security”, Amman-Jordan, 26th, Sept., 2021.
3. World Hydropower Congress, virtual conference, (7 – 24) Sept., 2021.
4. The Second National Conference on Water Energy Nexus: JO: NEXUS 2021, the Dead Sea, Jordan, (15-16) Sept. 2021.
5. International webinar on Plastic/Micro-plastic Pollution and Management”, June 2nd, 2021, organized by the EXCEED/SWINDON network.
6. **Water Security and Climate Change** conference (WSCC 2021), virtual conference, broadcasted from Cologne, Germany, 1st to 4th of March, 2021.
7. **International Renewable and Sustainable Energy Conference (IRSEC’20)**, virtually via video conferencing, broadcasted from Tetouan-Morocco, 25th to 28th, November 2020.
8. Webinar on Water, Energy Nexus in the MENA region, October 15 and 21, 2020. Organized by EXCEED/SWINDON project.

9. Regional workshop on: Water Resources and Climate Change: Impacts, Mitigation and Adaptation, 03-07, November, 2019, Amman, Jordan.
10. The fifth IWA international symposium on Water and Wastewater Technologies in Ancient Civilizations: Evolution of Technologies from Pre-History to Modern Times, September 11-13, 2019, Dead Sea, Jordan.
11. SWINDON conference 2019: The Future of Water Resources, October 13-18, 2019, Merida, Mexico.
12. COSIMENA water cluster workshop on Water Resource Management, 24 July, 2019, Amman-Jordan.
13. International conference on Water Security and Climate Change conference. Organized by EXCEED network, (03-06)/12/2018, Nairobi, Kenya.
14. Regional workshop on: Water-Energy-Food Nexus in MEANA region, 11-17, November, 2018, Aswan, Egypt.
15. Regional workshop on: Water Scarcity: Risks and Solutions, 24-27, April, 2018, Sousse, Tunis.
16. The German-Arab Knowledge Transfer Colloquium on Water-Energy-Food Nexus. (26/11 – 8/12), 2017, Duisburg-Germany.
17. Regional workshop on Water Use in MENA countries 2017, (3-8)/11/2017, Marrakech, Morocco.
18. Water, Energy Food Nexus Workshop on Integrated Science, Engineering and Policy: A Multi Stakeholder Dialogue, January 26 - 27, 2017, College Station, TX, United States.
19. 2016 Fulbright visiting scholar enrichment seminar. Democracy at the local level: the role of civil society in making change, December 11-14, 2016, San Diego, California,
20. Franco-Jordanian Forum on Water Sustainability. 18-20, Nov. 2014, Amman-Jordan,
21. Groundwater governance in the Arab World: Taking stock and addressing the challenges, October 29th, 2014, Amman-Jordan.
22. International conference on Social Studies in the MENA region. Sep. 28-29, 2014, Amman-Jordan.
Scientific and organizing committee member,
23. Exceed regional workshop on Urban Water Management and Demand Management. May 16-19, 2014, Antalya-Turkey,
24. International Conference on Water Resources and Environmental Management. May 13-15, 2014, Antalya-Turkey.
25. Water in the Arab World: Status, Challenges and Opportunities. February, 25-27, 2014, Amman-Jordan.
Chair of the organizing committee.
26. Exceed regional workshop, Sustainable Management of Hydrological Systems in Arid and Semi-Arid Regions. May 11-15, 2013, Amman-Jordan. *Organizing committee member.*

27. International Conference on Civil, Environmental and Structural Engineering, October, 14-15, 2013, Barcelona, Spain.
28. International Conference on Environmental, Biological and Ecological Sciences, and Engineering, Nov. 14-16, 2012, Venice, Italy,
29. Exceed Regional Expert Workshop on Water Losses Management in Water Supply Systems, September 25-29, 2012, Antalya, Turkey,
30. Second WEAP Regional Conference: Applying a Decision Support System as a tool for Integrated Water Resources Management and Climate Change Adaptation. May, 3-5, 2011, Amman, Jordan.
31. The first Water and Environment International Conference, 26-29, October, 2011, Marrakech, Morocco.
32. International Sustainable Water and Wastewater Management Symposium, May 26-28, 2010, Konya, Turkey.
33. Regional Conference: Applying WEAP as a Decision Support System for IWRM, May 25 – 27, 2009, Damascus, Syria.
34. The Third International Conference on Water Resources in Mediterranean Basin, November 1st to November 3rd, 2006, Tripoli, Lebanon.
35. The Regional EMWater Project Conference on Efficient Management of Wastewater Treatment and Re-Use in the Mediterranean Countries, October 30 to Nov. 1, 2006, Amman-Jordan.
36. The INCO-MED Water Conference, 14-15 June, 2004, Amman-Jordan.
37. The second international conference on Wadi Hydrology, July 1-4, 2003, Amman-Jordan.
38. The Annual Water Resources Planning and Management Conference, Water Resources and the Urban Environment, June 7-10,1998, Chicago, IL.

AWARDS

1. Fulbright grant for the academic year 2016/2017 to Texas A&M University,
2. USAID full Ph. D. grant through the University of Jordan between 1995-1999,
3. Full scholarship from the Jordan Armed Forces for B.SC. degree in Civil Engineering between 1980-1985,

RESEARCH GATE ADDRESS

https://www.researchgate.net/profile/Abbas_Al-Omari

LANGUAGES

Arabic – Native language, and
English – Fluent in speaking and writing.

PROGRAMMING LANGUAGES

Professional FORTRAN 90 programmer, and
Familiar with Visual Basic

SOFTWARE

Basic computer skills (Word, Excel, Power point, internet, etc.)

WaterCad: A software developed by Haestad methods which mainly simulates flows, pressures and different water quality parameters in water supplies,

EPANET: A software that simulates the behavior of water supplies, quantity and quality,

HEC_HMS: Hydrologic Modeling System developed by the US Army Corps of Engineers, Hydrologic Engineering Center.

HEC_RAS: River Analysis System developed by the US Army Corps of Engineers, Hydrologic Engineering Center.

EPA_SWMM: Environmental Protection Agency Storm Water Management Model.

Water Evaluation And Planning system (WEAP): A software developed by the Stockholm Environment Institute. WEAP is an Integrated Water Resources Management software that incorporates hydrologic, water quality and water allocation into one tool,

General Algebraic Modeling System (GAMS): A software that solves different types of constrained optimization problems, linear, dynamic, integer and mixed linear and integer,

QUAL2K: A software that simulates surface water quality for different selected parameters,

Mini Tab: Statistical analysis software.

Arc GIS: Familiar with Arc GIS.
